

Vita-Mix® Touch and Go™ Blending Station® In-Counter Gasket Installation

1. Follow instructions on page 10 of your Touch and Go Owners Manual to prepare the counter area.
2. Place enclosed Template Sheet on the counter before cutting to ensure exact measurements. Measure twice, cut once!
3. Peel off the white paper on the back of the In-Counter Gasket Black Foam Pad to reveal the adhesive backing.
4. Place adhesive side down onto the counter being careful to match up the gasket hole with the hole you have cut in the counter.
5. When you have matched up the holes, firmly press down on all sides so that the gasket is firmly attached.
6. Fold flap inside the hole down towards the ground.
7. Insert your Touch and Go Blending Station inside the hole, making sure the flap is down snug against the machine.

This gasket was designed to protect your machine from water damage and to reduce noise. Failure to properly install this gasket could result in moisture damage.
